
L&T launches new state-of-the-art hydraulic excavator

Larsen & Toubro Ltd (L&T), which offers a wide range of construction and earthmoving equipment, has added a new state-of-the-art hydraulic excavator model, the L&T-Komatsu PC71 to its product range.

The L&T Komatsu PC71 comes with a revolutionary system called HydrauMind. Essentially hydraulic, this system brings power, better manoeuvrability and controllability to the operator's fingertips. For example, when the ground condition changes in digging, HydrauMind

automatically adjusts the hydraulic oil pressure to accommodate the change. All the components in the machine work in synergy with the optimum combination of speed and power.

The spacious operator's cabin has an ergonomically-designed seat that can be tilted and can slide forward and backward with the work equipment and control levers.

The snap-ring type bucket pin fixture makes it simple to replace the bucket of the machine.

The other field-proven features in the machine are: centralised lubrication of work equipment; double lock electric connectors for increased reliability; and a fuel efficient 54-hp engine.

The L&T Komatsu PC71 hydraulic excavator is manufactured in Bangalore by L&T-Komatsu Ltd — L&T's joint venture with Komatsu Asia & Pacific Pte Ltd. This manufacturing facility in Bangalore has ISO 9001 accreditation for design, manufacture and service and ISO 14001 certification for environment management system.
